

iLink

Extending the power of iSynergy solutions with seamless integration

iLink seamlessly integrates iSynergy with third-party applications providing access to documents stored in iSynergy without the need to modify the application.

With iLink, users can create custom buttons and keyboard shortcuts within most applications, linking them to iSynergy and allowing users to execute user-defined queries, scan documents, or use barcode functions without the need to code or alter the application.

EASE OF USE

By simply dragging and dropping iLink buttons to your third party applications, you create on-demand iSynergy links that allows you to have access to documents stored in the document repository. Regardless of your key line-of-business application, iLink can provide access to the information that is stored in iSynergy. iLink also offers other image-processing functionality, such as producing barcode cover sheets or scanning directly into the application. iLink can intelligently acquire data from your third-party application and use it as image index values in the iSynergy solution.

NO PROGRAMMING REQUIRED

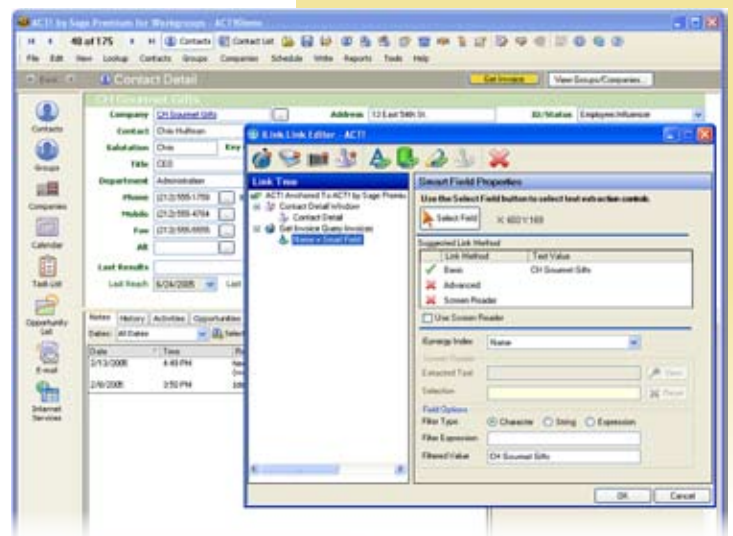

iLink is a simple way to create custom interfaces between iSynergy and third-party applications. Normally, approaching a third-party company with an integration project is very expensive. It requires engineers on both sides, a project manager, software with common interface, creating specs, coding, testing, implementation... all of which requires a significant time and financial investment. With iLink, you can simply drag and drop links to those third-party applications with no programming. Additionally, iLink requires very little IT knowledge thereby requiring no participation from your IT staff to enable this technology to work.

FLEXIBLE AND SCALABLE

iLink also provides functionality for defining hotkeys, or menu options for most any windows based applications. Links can be global, meaning that an independent hotkey function can be loaded

KEY BENEFITS

- ▶ **Direct integration with key line-of-business applications**
- ▶ **Immediate iSynergy storage and access of files from their native applications**
- ▶ **Increased search and retrieval performance**
- ▶ **Effortless customization without the need for IT involvement**
- ▶ **Drag and drop interface**

PRACTICAL APPLICATIONS

- ▶ **Accounting** - Looking up check and invoice data housed in iSynergy, directly from Great Plains, QuickBooks or other accounting applications
- ▶ **Legal** - Linking client files in case management applications to iSynergy
- ▶ **Medical** - Referencing billing and patient information in iSynergy, directly from practice management applications
- ▶ **Customer Service** - Looking up invoices, contracts, and barcodes in iSynergy, directly from CRM applications.

onto your server and configured to automatically implement on each workstation within the server. Built around an open database and utilizing XML and the Web Services of the iSynergy platform, iLink is a scalable network-based solution specifically designed to meet the demands of high-volume data and document capture.

WEB APPLICATION LINKING

Web-application linking technology enables users to add a button or shortcut keys to most Web-based applications and query the iSynergy database for documents that have the index fields selected in the application. This kind of no-coding application integration is unique to iSynergy.

HOT FIELDS

Hot Fields are keyboard shortcuts that allow users to execute database queries from any application while iLink is running.

SMART FIELDS

Smart Field technology enables iLink's ability to accurately extract data from any field in an application and pass it to iSynergy.

ANCHOR GROUPS

Anchor Groups tie iLink buttons to specific windows or tabs within an application.

CLICK-ONCE DEPLOYABLE

iLink is click-once deployable from within iSynergy, reducing deployment and administration time for system administrators.

CERTIFIED APPLICATIONS

iLink has been certified to work with Microsoft Dynamics CRM and GP (Great Plains), Intuit QuickBooks, ACT! by Sage, and more.
